Un plan d'occupation des sols synthétique pour la commune d'Arles

Les documents graphiques du plan d'occupation des sols (ou plan local d'urbanisme) sont souvent nombreux et il est difficile d'en avoir une vision globale. Ceci est encore plus vrai sur la commune d'Arles, dont la superficie d'environ 75 000 ha en fait la plus grande commune de France métropolitaine, avec la particularité d'avoir sur son territoire une agglomération principale et huit villages excentrés. Avec l'avènement au Système d'Information Géographique, dans les services municipaux, la saisie du POS s'est imposée comme une priorité permettant ainsi l'édition des documents graphiques réglementaires.

Très rapidement, la nécessité d'élaborer un document synthétique est apparue. Les zonages ont été regroupés en grandes familles. **Pour la première fois, les acteurs de l'aménagement ont accès en un seul coup d'œil à l'ensemble du territoire sur un même document et ainsi, grâce à la colorisation, peuvent percevoir très rapidement les orientations données par le document d'urbanisme.**
